

Bluetooth

**Transfer data from your mobile
phone to the computer**

What is Bluetooth?

Bluetooth wireless technology enables mobile phones, computers and personal digital assistants (PDAs) to connect with each other using short-range radio waves instead of cables, allowing them to "talk" to each other so they can be all coordinated.

Bluetooth technology can be located on computers 1, 2 and 51 in the LRC.

1. On your phone switch Bluetooth on.
2. On your mobile phone select the image or data you want to send.
3. In the phones options select **Send** and choose **Via Bluetooth**.
4. The phone will now search for Bluetooth devices.
5. Select the appropriate PC number (RC1, RC2 or RC51).
6. On the computer a **File Receive Confirmation** box will appear.
7. On the computer select the **Save Folder** where the image or file will be stored. e.g. memory stick.
6. In the File Receive box click ok to receive the file or data.
7. The file will now be transferred.
